OPERATION:

MAKE SAKSHI SMILE ■

A personalised pixel-art apology game concept

Midnight plum	Bubblegum pink	Mint green	Warm parchment
#211D3D	#FFB5D2	#C8F7DC	#FFF0CF

The idea

Sakshi asked her boyfriend to make it up to her after he was joking around and annoyed her a little. He couldn't think of something in the moment, so he makes her a tiny interactive game instead. The experience should be cute and funny, but still include a sincere apology and leave space for her feelings.

> ***Core line:*** *"You asked me to make it up to you. My brain had zero ideas, so I made you a whole game instead."*

Non-negotiable visual rule

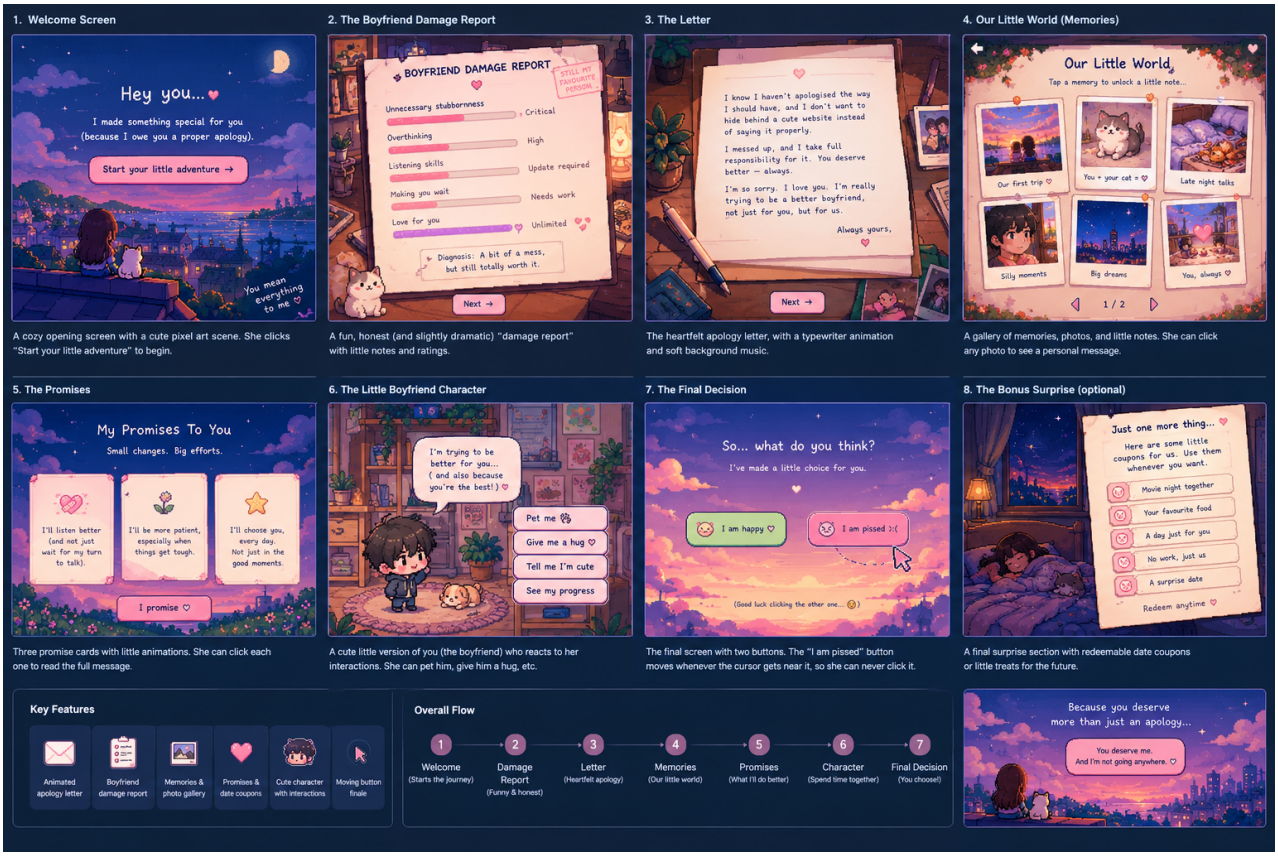

Use one consistent pixel-art background throughout the entire website. Keep the same dreamy purple-pink evening sky, crescent moon, stars and distant landscape on every screen. Change only the foreground UI panels, text, character poses and small animations. Do not introduce a new background for every section.

Tone: teasing + affectionate + sincere

The humour should feel like natural couple banter, not like a huge dramatic apology. The site can tease the boyfriend for being an idiot, but it should never imply Sakshi has to forgive him or stop being upset because he made something cute.

Visual direction

A retro 16-bit game interface with chunky pixel fonts, pink pixel borders, cream parchment-style dialogue panels, small heart icons, subtle twinkling stars and one reusable boyfriend character sprite. Use a fixed background image and keep animations light.

Reference storyboard illustration: use the layout and scene ideas as inspiration, but keep the final website's background consistent on every screen.

UI rules

- **Background:** one reusable pixel-art evening sky; fixed while the content changes.
- **Panels:** cream/parchment cards with the same purple pixel border and spacing.
- **Character:** one small pixel boyfriend sprite with a few expressions and reactions.
- **Motion:** gentle floating hearts, blinking stars, simple typewriter text and short pixel transitions.
- **Sound:** optional chiptune music with an obvious mute/play control; never rely on autoplay.
- **Responsive layout:** design for phones first, then scale up for desktop.

Screen-by-screen flow

01 · Welcome — A very important mission

Text: “Hey Sakshi! ■ So... you asked me to make it up to you. And my brain decided to stop functioning at the worst possible moment. So I made you a whole game instead. You're welcome. Hehe.”

Interaction: a waving pixel boyfriend, a spinning lollipop and a START MISSION button.

02 · Boyfriend Damage Report

Report items: Unnecessary teasing — dangerously high; Ability to come up with an apology — 404 not found; Sakshi's patience with this idiot — under investigation; Ability to make Sakshi smile — downloading; Love for Sakshi — permanently maxed out.

Interaction: Punchline: “Diagnosis: Boyfriend is an idiot. Unfortunately, he's your idiot.” Button: BEGIN REHABILITATION.

03 · The Apology Book

An open pixel-art book reveals the apology one line at a time. Acknowledge that the joke annoyed her, say sorry without defending it, and explain that her feelings matter even when he is being silly.

Interaction: typewriter reveal, pause/skip option and a simple CONTINUE button.

04 · The Chupa Chups Offering

Text: “I've been advised that peace negotiations may require appropriate tribute.” A collectible lollipop reveals: “One Chupa Chups for the pretty girl. Not a bribe. Definitely not a bribe. ■”

Interaction: tap a lollipop to collect it. Add a real-world coupon for an actual Chupa Chups.

05 · Sakshi's Little Library

Three clickable books: “101 Ways to Annoy Your Boyfriend”; “How to Apologise Properly”; and “The Story of Us”. The final book reveals a personal affectionate note.

Interaction: books tilt or open on tap; use short, funny annotations.

06 · Boyfriend Rehabilitation Centre

A tiny pixel version of the boyfriend appears on the same background. He has a few reactions: blush, wave, apologise, or look dramatically ashamed.

Interaction: Interactions: BONK (foam hammer), HUG, APOLOGISE and FEED HIM A CHUPA CHUPS. Keep the actions light and optional.

07 · Final Decision

Text: “Okay, Sakshi. I've completed my mission... or have I? ■ How are we feeling, madam?”

Interaction: Buttons: I'M HAPPY ■ and I'M PISSED >:(. The angry button dodges the cursor with a pixel smoke puff. Include a small sincere option for “I'm still upset” so the joke doesn't dismiss her feelings.

08 · Optional Bonus — Make-it-up-to-you Coupons

Coupons for a movie night of her choice, her favourite food, a date planned by the boyfriend, an uninterrupted conversation, or a surprise.

Interaction: coupons flip like collectible cards. Only promise things he can genuinely follow through on.

Draft apology letter

Dear Sakshi,

> *So, you asked me to make it up to you, and in that moment, my brain had absolutely nothing. Zero ideas. No thoughts. Just vibes.*
>
> *Which is honestly impressive, considering I somehow have enough brainpower to annoy you in the first place.* ■
>
> *I know I was joking around, but I get that it made you a little mad, and I'm sorry. I don't want to brush that off just because I meant it as a joke. I care about how you feel, even when I'm just being my usual annoying self.*
>
> *So I made you this little game. Is it a completely reasonable response to being told to make it up to your girlfriend? Probably not. Could I have just bought you a Chupa Chups and apologised like a normal person? Absolutely.*
>
> *But you deserve a little effort, and I wanted to make something that's just for you.*
>
> *You're my favourite person to annoy, my favourite person to talk to, and someone I never want to make feel like her feelings don't matter.*
>
> *I'm still learning how to get things right. But I want to be someone who listens, who knows when to stop joking around, and who makes you feel loved even in the smallest moments.*
>
> *Also, please note that the boyfriend in this game is very sorry, extremely cute, and currently accepting bonks as punishment.*
>
> *I love you, Sakshi. Here's your virtual Chupa Chups for now. Your actual one is a separate matter.* ■

Love,

Your slightly stupid but very lucky boyfriend ■

Final screen: behaviour and wording

I'm happy ■ → “YAY! You made my little pixel heart very happy. I still owe you the effort to match it.”

I'm pissed >:(→ moves away when the cursor approaches, with a tiny “nope!” animation. On mobile, it dodges on tap and stays within the visible game panel.

Gentle fallback: “Okay, jokes aside... I'm still upset.” → “That's okay. You don't have to feel better immediately. I'm here to listen when you're ready. ■”

Important: the dodging button is a playful gag, not a way to prevent Sakshi from expressing her feelings. Keep the sincere fallback visible and easy to use.

Build and deployment direction

The later implementation guide can instruct Claude to build this as a static React + Vite website hosted on GitHub Pages. No backend is required for the core experience.

• **Frontend:** React + Vite.

• **Styling:** CSS or Tailwind, with a small set of reusable components.

• **Assets:** one shared pixel-art background, reusable character sprites, lollipop and book illustrations, and UI panels.

• **Interaction state:** move between screens, open books, collect a lollipop, reveal the letter, flip promises and run the final button gag.

• **Deployment:** GitHub repository and GitHub Pages using a production build.

• **Mobile support:** touch-friendly buttons, no hover-only essential interactions, and the dodging button constrained to the screen panel.

• **Privacy:** use only photos/voice recordings intentionally included; no backend means reactions won't automatically be sent to the boyfriend.

Final creative checklist

Keep	Avoid
One consistent pixel-art background	A different background for every screen
Personal jokes about teasing, Chupa Chups and books	Generic, overdramatic apology clichés
A sincere apology and realistic promises	Making forgiveness feel mandatory
Small animations and reusable panels	Too many effects that distract from the message

---

This is the creative concept brief, not the coding guide. Once the concept and wording are approved, the next document can give Claude the exact component structure, visual specifications, interaction logic, asset checklist and GitHub Pages steps.
